

OSMOSITY

POWERED BY

BIOTEK

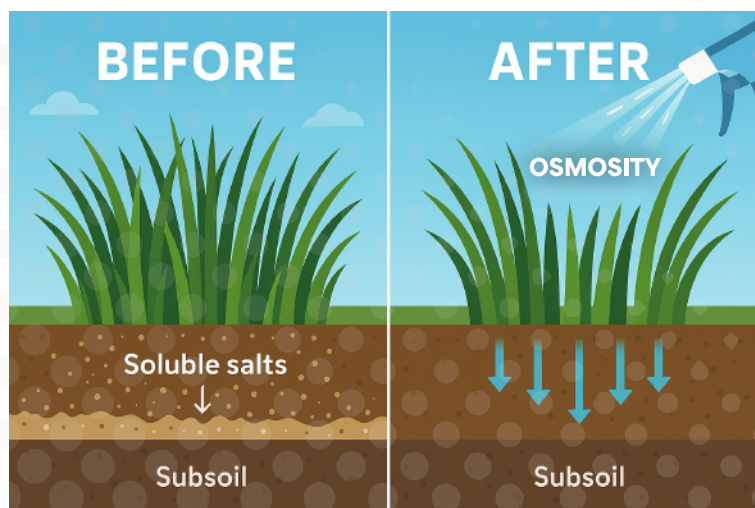

PENETEK

TECHNOLOGY-BASED SALT MITIGATION SOLUTION

Osmosity is beneficial for Florida turfgrass management by mitigating the negative effects of excess soluble salts, which can lead to poor root development, increased susceptibility to drought, and turf discoloration. This soil amendment utilizes proprietary BioTek and PeneTek technologies to change the osmosis of salt and enabling it to percolate through the soil profile and exit the root zone.

- Perfect of Florida's coastal soils, storm surges, build up and reclaimed irrigation water
- Helps to leach excess salts below root zone to improve soil structure
- Reducing salt pressure can enhance water and nutrient uptake in turf and ornamentals

RECOMMENDED APPLICATION RATES

Golf Course Greens & Tees	Fairways & Athletic Fields	Sod Farms & Lawns	Tree & Shrub
3 to 6 fl oz per 1,000 ft ²	3 to 15 fl oz per 1,000 ft ²	3 to 15 fl oz per 1,000 ft ²	64 oz per 50 gallons of water
Every 14 days as needed	Quarterly as needed	Quarterly as needed	Quarterly as needed
